

IN THE CLAIMS

1. (Previously Presented) A content delivery system for delivering content over a network, comprising:

a subscriber serving apparatus serving at least one user terminal;
a delivery server for delivering content; and
a billing server for billing for the delivery of the content, wherein
the subscriber serving apparatus includes monitoring means for monitoring a data stream being delivered from the delivery server to the user terminal, and
the billing server includes judging means for judging the amount of billing to be charged to a user based on delivery quality of the monitored data stream at the subscriber serving apparatus, and bills the user based on the result of the judgment made by the judging means.

2. (Previously Presented) A content delivery system for delivering content over a network, comprising:

a subscriber serving apparatus serving at least one user terminal;
a delivery server for delivering content; and
a billing server for billing for the delivery of the content, wherein
the subscriber serving apparatus includes monitoring means for monitoring a data stream being delivered from the delivery server to the user terminal, and
judging means for judging the amount of billing to be charged to a user based on delivery quality of the monitored data stream at the subscriber serving apparatus, and
the billing server bills the user based on the result of the judgment made by the judging means.

3. (Currently Amended) A content delivery system as claimed in claim 1, wherein
the delivery server includes notifying means for identifying the subscriber
serving apparatus serving the user terminal that originated a delivery request, and for sending
information specifying the user terminal and the data stream to be monitored to the subscriber
serving apparatus, and
the subscriber serving apparatus, based on the information received from
the delivery server, identifies the user terminal and the data stream to be monitored by the
monitoring means.

4. (Previously Presented) A content delivery system as claimed in claim 1, further
comprising a management apparatus for accepting a delivery request from the user terminal,
wherein

the management apparatus includes means for identifying the subscriber
serving apparatus serving the user terminal that originated the delivery request, and for sending
information specifying the user terminal and the data stream to be monitored to the subscriber
serving apparatus, and

the subscriber serving apparatus, based on the information received from
the management apparatus, identifies the user terminal and the data stream to be monitored by
the monitoring means.

5. (Previously Presented) A content delivery system as claimed in claim 1, wherein
the judging means includes a billing judgment table for setting a billing parameter, and

determines the amount of billing to be charged to the user through the user terminal, based on the result of the judgment of the delivery quality of the monitored data stream and the billing parameter associated therewith.

6. (Previously Presented) A content delivery system as claimed in claim 1, wherein the judging means judges whether to bill or not bill the user based on the delivery quality of the monitored data stream at the subscriber serving apparatus.

7. (Currently Amended) A content delivery system as claimed in claim 2, wherein the delivery server includes notifying means for identifying the subscriber serving apparatus serving the user terminal that originated a delivery request, and for sending information specifying the user terminal and the data stream to be monitored to the subscriber serving apparatus, and

the subscriber serving apparatus, based on the information received from the delivery server, identifies the user terminal and the data stream to be monitored by the monitoring means.

8. (Previously Presented) A content delivery system as claimed in claim 2, further comprising a management apparatus for accepting a delivery request from the user terminal, wherein

the management apparatus includes means for identifying the subscriber serving apparatus serving the user terminal that originated the delivery request, and for sending information specifying the user terminal and the data stream to be monitored to the subscriber serving apparatus, and

the subscriber serving apparatus, based on the information received from the management apparatus, identifies the user terminal and the data stream to be monitored by the monitoring means.

9. (Previously Presented) A content delivery system as claimed in claim 2, wherein the judging means includes a billing judgment table for setting a billing parameter, and determines the amount of billing to be charged to the through the user terminal, based on the result of the judgment of the delivery quality of the monitored data stream and the billing parameter associated therewith.

10. (Previously Presented) A content delivery system as claimed in claim 2, wherein the judging means judges whether to bill or not bill the user based on the delivery quality of the monitored data stream at the subscriber serving apparatus.
